

Announcements

- Updated slides and code for Tue

Coming up

- Making code faster
- Simulating birth-death IBM
 - distributions
- Tracking individual states
- Adding processes
 - heterogeneous individuals, density dependence, sexual reproduction
- Recap: emergent distributions so far

Principles for computation

- Don't copy arrays
- Don't do calculations unless needed
- When an event affects 1 individual
 - update only that individual
 - and dependent quantities
- IBM: only a small part of the system changes on each iteration
 - restrict scope of calculations to here
- Book keeping becomes more complex
